IT114-004-S2024 - [IT114] Number Guesser 4

Submissions:

Submission Selection

1 Submission [active] 2/12/2024 8:32:06 PM

Instructions

^ COLLAPSE ^

- 1 .Create the below branch name
- 2 .Implement the NumberGuess4 example from the lesson/slides
 - 1 <https://gist.github.com/MattToegel/aced06400c812f13ad030db9518b399f>
- 3 .Add/commit the files as-is from the lesson material (this is the base template). You may want to push this commit so you can open the pull request and keep it open.
- 4 .Pick two (2) of the following options to implement
 - 1 .Display higher or lower as a hint after a wrong guess (only after a wrong guess that doesn't roll back the level)
 - 2 .Implement anti-data tampering of the save file data (reject user direct edits)
 - 3 .Add a difficulty selector that adjusts the max strikes per level (i.e., "easy" 10 strikes, "medium" 5 strikes, "hard" 3 strikes)
 - 4 .Display a cold, warm, hot indicator based on how close to the correct value the guess is (example, 10 numbers away is cold, 5 numbers away is warm, 2 numbers away is hot; adjust these per your preference) Only display this when the wrong guess doesn't roll back the level
 - 5 .Add a hint command that can be used once per level and only after 2 strikes have been used that reduces the range around the correct number (i.e., number is 5 and range is initially 1-15, new range could be 3-8 as a hint)
 - 6 .Implement separate save files based on a "What's your name?" prompt at the start of the game (each person gets their own save file based on user's name)
- 5 .Fill in the below deliverables
- 6 .Save changes and export PDF
- 7 .Git add/commit/push your changes to the HW branch
- 8 .Create a pull request to main
- 9 .Complete the pull request (don't forget to locally checkout main and pull changes to prep for future work)
- 10 Upload the same PDF to Canvas

Branch name: M3-NumberGuesser-4

Tasks: 7 Points: 10.00

Implementation 1 (4 pts.)

^ COLLAPSE ^

Task #1 - Points: 1

Text: Chosen Option and Details

Checklist

*The checkboxes are for your own tracking

#	Points	Details
#1	1	Mention which option you picked
#2	1	Explain the logic of how you solved/implemented the chosen option (concrete details). Explain how the code works, don't just paste code snippets

Response:

implemented option 3 – a difficulty selector.

The code provides you with three difficulty options and then matches up the corresponding letter to the number of strikes using a switch case. It takes a substring of just the first character in case the user types out the difficulty instead of using the letter and has a "default" in case the user enters something which can not be parsed (same as medium difficulty).

Task #2 - Points: 1

Text: 2+ Screenshots of code and demo

Checklist

*The checkboxes are for your own tracking

#	Points	Details
#1	1	Show implementation working by running the program
#2	1	Clearly caption the screenshot of what you're showing
#3	1	The code screenshot(s) clearly show the code specific to the feature
#4	1	A comment with the UCID/date is visible near the code change(s)

Task Screenshots:

☐ Large Gallery

Checklist Items (0)

implementation of option 3

Implementation 2 (4 pts.)

COLLAPSE

Task #1 - Points: 1

Text: Chosen Option and Details

Checklist

*The checkboxes are for your own tracking

#	Points	Details
<input type="checkbox"/> #1	1	Mention which option you picked
<input type="checkbox"/> #2	1	Explain the logic of how you solved/implemented the chosen option (concrete details). Explain how the code works, don't just paste code snippets

Response:

I also implemented option 6 which allows a user to enter this name which then gets a file extension appended to it, and then is set to the 'fileName' property. The code already had an implementation of code that checked for an existing file and would create one if it did not exist, and therefore this was not re-implemented.

Task #2 - Points: 1

Text: 2+ Screenshots of code and demo

implementation of option 6

Misc (2 pts.)

^ COLLAPSE ^

Task #1 - Points: 1

Text: Reflection

Checklist

*The checkboxes are for your own tracking

#	Points	Details
<input type="checkbox"/> #1	1	Example prompts: Learn anything new? Face any challenges? How did you overcome and issues?
<input type="checkbox"/> #2	1	At least a few logical sentences related to the assignment.

Response:

I did not come into any challenges with this homework – I would have been able to implement something more interesting, however, none of the options were terribly interesting and/or difficult.

Task #2 - Points: 1

Text: Pull Request URL

Details:

URL should end with /pull/# where the # is the actual pull request number.

URL #1

<https://github.com/GarrettGR/IT114/pull/3>

Task #3 - Points: 1

Text: Waka Time (or related) Screenshot

Checklist

*The checkboxes are for your own tracking

#	Points	Details
<input type="checkbox"/> #1	1	Screenshot clearly shows what files/project were being worked on (the duration of time doesn't correlated with the grade for this item)

Task Screenshots:
